Summary

Full Stack Developer with 5+ years of experience designing and developing enterprise applications using Java 17, Spring Boot, Microservices Architecture, RESTful and GraphQL APIs, and React-supported web technologies. Experienced in building secure, scalable cloud-native systems across GCP and AWS, with strengths in distributed systems, database optimization, Docker, Kubernetes, CI/CD, and automated testing. Effective collaborator in Agile environments, delivering reliable solutions for complex business operations.

Skills

- **Programming Languages:** Java 17, Core Java/J2EE, Java 8 Features (Streams, Lambda Expressions, Collections, Multithreading), JavaScript (ES6+), TypeScript, SQL, PL/SQL
- **Java & Spring Ecosystem:** Spring Boot 3.x, Spring Framework, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Spring Cloud, Spring AOP, Spring Validation, Spring Actuator, Maven, Gradle
- **Backend Development:** RESTful APIs, GraphQL APIs, Microservices Architecture, Distributed Systems, Event-Driven Architecture, API Design, API Gateway, Service Discovery Eureka, Service Discovery Consul, OpenAPI (Swagger), JSON, XML, JAX-RS (Jersey), SOAP (JAX-WS), JWT Authentication, OAuth2, SAML, Role-Based Access Control (RBAC)
- **Frontend Technologies:** React JS, HTML5, CSS3, Bootstrap, Material UI
- **Cloud Platform:** Google Cloud Platform (GCP), Google Kubernetes Engine (GKE), Cloud Run, Cloud SQL, Cloud Storage, Pub/Sub, Cloud Build, Artifact Registry, IAM, Cloud Logging, Cloud Monitoring, Secret Manager, Cloud Load Balancing
- **Containers & DevOps:** Docker, Kubernetes, GitHub Actions, Jenkins, Terraform, Git, GitHub, Maven, Linux/Unix, Shell Scripting, CI/CD Pipeline Automation
- **Databases:** PostgreSQL, Google Cloud SQL, Oracle Database, MySQL, SQL, PL/SQL, Database Design, Query Optimization, Stored Procedures, Indexing, Transaction Management
- **Performance & Monitoring:** JVM Performance Tuning, Memory Profiling, Garbage Collection Analysis, Redis, Memcached, Elastic Stack (ELK), Log Analysis, Performance Optimization, Application Monitoring
- **Testing & Quality:** JUnit 5, Mockito, Unit Testing, Integration Testing, API Testing (Postman), Test-Driven Development (TDD), Code Reviews, Static Code Analysis, SonarQube
- **Development Tools:** IntelliJ IDEA, Eclipse, VS Code, Postman, Swagger UI, JIRA, Confluence, GitHub Copilot
- **Software Development Practices:** SDLC, Agile Scrum, Scrum Ceremonies, Sprint Planning, Code Reviews, Pair Programming, Technical Documentation, Production Support, Root Cause Analysis, Debugging, Secure Coding Practices

Work Experience

MindStack Technologies

Mar 2024 - Present

Full Stack Developer

- Designed, developed, and maintained an enterprise Loan Management System using Java 17, Spring Boot, React JS, Spring Security, and Microservices Architecture, supporting more than 50,000 loan applications annually while improving backend scalability and reducing processing delays by 35%.
- Designed and implemented 20+ RESTful and GraphQL APIs for loan origination, customer onboarding, document management, payment processing, approval workflows, and reporting using Spring Boot, Spring MVC, Spring Data JPA, Hibernate, and API Gateway, reducing API response times by 30% and improving integration across multiple business services.
- Developed secure backend services using Spring Security, JWT authentication, OAuth2, and SAML-based Single Sign-On (SSO), implementing role-based access control for customers, loan officers, and administrators while ensuring compliance with enterprise security standards.
- Built scalable microservices following domain-driven architecture principles with Service Discovery Eureka, enabling independent deployment, improved fault isolation, and seamless communication between customer, loan, payment, notification, and reporting services.
- Developed complex database models and optimized more than 150 SQL and PostgreSQL queries using Spring Data JPA, Hibernate, indexing strategies, and stored procedures on Google Cloud SQL, reducing query execution time by 40% and supporting high-volume transactional workloads.
- Containerized backend applications using Docker and deployed them on Google Kubernetes Engine (GKE) and Cloud Run, utilizing Cloud Build, Artifact Registry, Cloud Storage, Cloud Logging, and Cloud Monitoring to achieve highly available, scalable, and production-ready deployments.

- Implemented asynchronous event-driven communication using Google Cloud Pub/Sub to process loan status updates, notifications, and document events, improving overall system responsiveness and reducing synchronous processing bottlenecks.
- Built end-to-end CI/CD pipelines using GitHub Actions and Jenkins, automating application builds, unit testing, code quality checks, container image publishing, and deployments across development, QA, and production environments, reducing deployment time by 60%.
- Improved application performance by implementing Redis caching, JVM performance tuning, connection pooling, and centralized logging with Elastic Stack, increasing API throughput by 25% while reducing database load.
- Collaborated with cross-functional Agile teams including architects, QA engineers, business analysts, and product owners during 30+ sprint cycles to define technical solutions, participate in design and code reviews, support production operations, and mentor junior developers while writing 300+ unit and integration test cases that reduced production defects by 30%.

Vinx Innovative Tech

Jan 2021 - Aug 2022

Java Developer

- Developed and enhanced enterprise Java applications using Core Java, Spring Boot, Spring MVC, Hibernate, and Microservices Architecture, supporting mission-critical business operations for multiple enterprise clients.
- Designed and implemented more than 15 RESTful and GraphQL APIs for customer management, workflow automation, reporting, and third-party integrations, improving application interoperability and reducing manual processing efforts by 35%.
- Built reusable backend modules using Spring Boot, Hibernate, and Spring Data JPA, integrating Oracle and PostgreSQL databases while optimizing more than 120 SQL and PL/SQL queries, improving overall application performance by 30%.
- Deployed Java applications on Google Cloud Platform using Cloud Run, Cloud SQL, Cloud Storage, and Google Kubernetes Engine (GKE) while supporting containerized deployments with Docker and Service Discovery Consul, ensuring reliable and scalable cloud infrastructure.
- Implemented secure authentication and authorization using Spring Security, JWT, and role-based access control, protecting enterprise APIs and sensitive customer information from unauthorized access.
- Built automated CI/CD pipelines using GitHub Actions and Jenkins, reducing deployment effort by 50% while improving release consistency and minimizing production deployment failures.
- Worked closely with QA teams to execute 250+ unit, system, and integration test cases, resolving production defects, supporting root cause analysis, and improving overall software quality across multiple application releases.
- Participated in 25+ Agile sprint cycles, collaborating with business analysts, solution architects, and product owners to translate business requirements into scalable technical solutions while consistently achieving sprint delivery goals.

Education

Indiana Tech

Aug 2022 - Mar 2024

Master of Science, Information Systems

Certificates

- AWS Certified Data Engineer – Associate: Amazon Web Services
- Agents and Workflows OpenAI: OpenAI
- AI Fluency Framework & Foundations: Anthropic
